

Smarter Solutions Wetstock management

TOKHEIM
ProGauge

Smarter wetstock solutions

Tokheim ProGauge manufactures, installs and services a complete suite of environmental and wetstock management solutions. We offer a variety of systems for the retail, commercial and depot markets including probes, consoles, and analytic services. Our wetstock solutions ensure you comply with local legislation, improve inventory tracking, and they simplify the delivery process. And, by choosing Tokheim you know that you will have the local support of the world's leading fuel retail specialists.

“From industrial probes for fuel depots, to wetstock systems for tankers, right through to innovative tank level gauges across your forecourt.”

A range of flexible Probes and Fuel Quality Sensors

XMT Probes

These intrinsically safe probes are manufactured in rigid stainless steel to offer a durable, long-lasting and quality solution. Utilising magnetostrictive technology they are highly accurate and are available in a range of sizes (500mm – 5500 mm). These probes are suitable for all fuel types including LPG and AdBlue®.

XMT Wireless

Innovative wireless probes using smart technology for improved reliability and reduced interference. A dedicated bandwidth for metering and telemetry is better suited to the service station environment. Low power consumption extends the battery life up to 5 years. The easy installation of the wireless probes and antennas eliminates the need to dig up a site to install wiring.

XMT Exd

Suitable for certain environments, such as depots, where an explosion proof probe is required. It is manufactured in a robust stainless steel shaft and enclosure for added durability. For improved accuracy of data, an internal battery unit provides back-up power when the energy supply is cut.

Fuel Quality Sensor

This unique system can detect fuel quality in a matter of seconds. Standalone or in combination with a console and probes the sensor will directly and simultaneously measure the viscosity, density, dielectric constant and temperature of fuels.

Relying on patented tuning fork technology, the sensor monitors the direct and dynamic relationship between multiple physical properties to determine the quality, condition and contaminant loading of fuels such as diesel, biodiesel, gasoline, Jet fuel and kerosene.

A flexible range

When it comes to choosing a console Tokheim ProGauge has a wide variety of options to select from. Available from 2 to 32 tanks our Maglink consoles offer flexible configurations for use in a variety of fuelling set ups.

Scalable Consoles

MagLink LX

Tokheim ProGauge's MagLink LX is the next generation console that offers flexible and industry standard features and functions. Using a Linux operating system and with the option of wired or wireless probes, the console can manage from 1 to 32 probes without the need to add expansion modules.

With a web based server the remote fuel management and connectivity is supported by any web enabled PC or tablet.

MagLink 8T

This entry level tank gauge console, managing up to and including 8 tanks, with its touch screen and serial interfaces provides a cost-effective solution to fuel management.

Supporting both wired and wireless probes the system can interface with all the major POS suppliers.

MagDirect

Tokheim ProGauge's MagDirect console is a cost-effective solution that provides a direct connection from the Point of Sale (POS) to the probe. It comes equipped with an intrinsically safe barrier and multiple POS interfaces are supported. It allows up to 8 probes to be connected to the POS.

Simple, modern comms

Often the best solution is the simplest one. That's why we've added easy to use features to our powerful consoles such as SMS communication. If you text it, it will text you back to tell you how much fuel is in the tanks.

Additional Tokheim ProGauge solutions

Data Analysis

Through Fairbanks, our wetstock analysis partners, you can add value and insight to your data. An analyst monitors your site 24/7 for losses and alerts the site about any issues (e.g. leaks or fuel theft). They will investigate and provide exact findings on any loss.

3D Laser

This innovative automatic tank calibration system utilises a 3D Laser to provide an accurate strapping table for the console or point of sale. It is safer, faster and more cost-effective than the traditional method used. It is ATEX certified and metrologically approved.

Tank Lining

Tokheim and its partner, Fenotec, offer a pioneering tank lining solution. Using a patented mounting system the durable leak protection is installed in just days to provide years of protection to underground tank units. The solution reduces costs, increases safety and provides long-term environmental protection for your forecourt.

Depot/Tanker solutions

We offer a set of solutions to manage fuel inventory every step of the way. Fuel depot probes up to 12 metres in length plus detailed wetstock software applications. We help track fuel from depot to delivery through accurate vehicle tanker probes and sensors.

POS Integration

Tokheim ProGauge solutions can help bring additional power to your POS system. We directly interface to Tokheim's Fuel POS plus a number of third party POS systems so that you can track inventory and manage wetstock from one central location.

Installation and Service

Tokheim's local experts work with you to ensure that the solution we deliver is adapted and optimised for deployment in your marketplace. We install and service ProGauge solutions in a safe and secure manner to ensure your systems operate long into the future.
