

SafePay Closed Cash Handling

Tokheim, in partnership with Gunnebo, deliver SafePay – a pioneering closed cash system for retailers. This closed cash handling system can replace manual tills with recycling cash systems. Cash payment is counted and correct change paid automatically. Coins and notes are secured and controlled from the moment customers pay until the money reaches the cash-counting centre.

“With SafePay, stores are safer, cash differences and shrinkage are removed, and back office administration is reduced.”

How it works

1

The customer deposits the coins into the coin recycler. It automatically sorts and counts the coins.

2

The notes are always passed to the cashier who inserts them into the note reader – cashiers are generally faster at the note insertion process.

3

The change is automatically dispensed both in coins and notes by the SafePay solution.

Fuel POS with SafePay

The SafePay system is fully integrated with the Fuel POS so you can now combine a secure cash handling system with debit, credit, and fuel cards payment.

The system consists of two different units: one in front of the Fuel POS for the customer to insert coins and one behind the Fuel POS for the cashier to insert bank notes. All payment and transactions are connected to the EPOS so you never have to reconcile a separate set of accounts.

SafePay applications

At the check-out

All payments are handled with full control and security. Tokheim Fuel POS and SafePay combine for a powerful and secure retail solution.

- Reduces cash handling and administration
- Removes cash differences and internal fraud
- Safer store for customers and employees
- Staff flexibility with cashier no longer responsible for cash

In the office

Shop staff securely carry the days takings in ink-protected SafePay cassettes to the back office and deposit them into a SafePay transfer unit ready for cash in transit (CIT) collection.

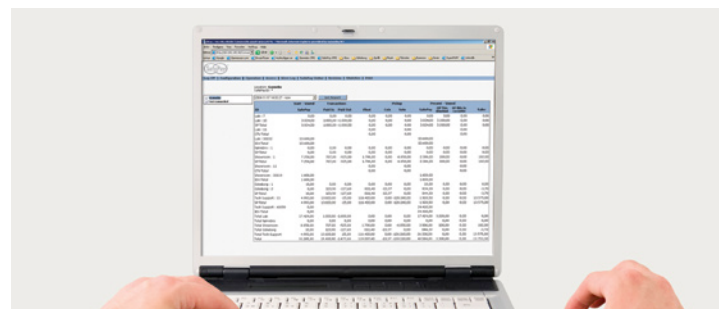

- Removes back office cash administration
- Cash is never directly exposed in the store
- Efficient cash collection

Cash management

SafePay Control is a web-based back office cash management software solution for automatic cash reconciliation and cash control. It gives retailers real-time cash levels and reports for all checkouts.

- Simplify end-of-day procedures
- Ensure all checkouts have correct change for the day
- Establish patterns/areas of concern

Bank services

SafePay enables close and efficient collaboration with CIT companies and banks.

- Direct credit of daily takings
- Completely outsourced CIT services
- Improved working capital
- Online cash management
- Reduced cash handling cost

SafePay Benefits

Improved security

No manual cash handling responsibility for staff.

Safer environment

A safer store for customers and employees.

Better customer service

Cashiers have more time to focus on your customers.

Easy to manage

Automatic reconciliation and cash control.

More efficient

A faster, more streamlined cash handling process.

Improved working capital

Partner with local banks for direct credit of daily takings.

Local knowledge, global team

Tokheim has an international support network that puts service first. We are and will be there every step of the way.
