

TOKHEIM T.I.E.[™] TYRE INFLATOR

The Tokheim T.I.E.™ tyre inflator is an innovative piece of equipment that complements any forecourt with its sleek look and smart design. Originally engineered for light vehicles, it has one of the industry's smallest footprints, with a truck version also available. Each T.I.E. tyre inflator passes a series of stringent quality tests that you would associate with the Tokheim brand. The final result is a stylish and contemporary inflator that is built to last in the toughest outdoor environments.

“Our local sales and authorised service representatives have the knowledge and experience to help you to select a tyre inflator solution that’s right for your business.”

T.I.E tyre inflator at a glance

Design

Sleek, contemporary design. The T.I.E. has one of the industry's smallest footprints. The innovative look helps differentiate your forecourt from other service stations.

Payment

It accepts direct payment in local currency or alternatively it can be set up as a token system.

Hose management

It is delivered with either a standard hose on a retaining hook or alternatively you can choose a hose retractor system for a tidier look.

Internal inflating components

The T.I.E. is a stand-alone device, so there is no need to connect to a remote compressor. The components are designed to work for longer with less servicing required. The components work very effectively, in the toughest conditions, with a lower service intervention rate than other tyre inflators in the marketplace.

T.I.E. Features and Benefits

The T.I.E. is completely modular and upgradable at any time in the future. The inflation pole is designed to ensure quality and safety is maintained on your site.

T.I.E. Merkmale und Vorteile

The T.I.E. is a standalone solution so there is no need to connect to a remote compressor – as such it has one of the industry's lowest noise levels.

It is equipped with a safety relief valve so as to not 'over-inflate' tyres and limit the possibilities of any accidents.

You can have peace of mind that your product meets all the requisite regulatory standards for the European market in line with LNE certification.

Installation and after sales support from the industry's largest service network provider.

Optional Features

The T.I.E. can also be delivered with two water tap options fitted to the front door. One a simple water push tap to clean the user's hands. Alternatively we supply a spiral hose with pressurised nozzle that can be used to fill up the car's windscreen cleaning container and to clean the motorist's hands.

Less service, less hassle

Tokheim's dispensing solutions have been independently verified to have less service interventions than other industry installed and supplied products. Greater uptime means your customers can rely on your service station for a faster and more pleasant experience.

T.I.E. Technical Specifications*

Standard Features

- Pressure manometer W&M certified
